

JENN-AIR NOW WORKS WITH NEST

A WALL OVEN THAT TURNS DOWN THE THERMOSTAT FOR YOU

The beautiful sight lines of an open-concept kitchen and Nest are two sides of the same luxurious coin. Your customers want an integrated, beautiful, smart home that makes entertaining effortless, and more and more are creating that environment with Nest and products that work with Nest.

Simply asking your customer if they have Nest in their home can open up new avenues to help them find their ideal wall oven; one that can integrate with the Nest products already in their home.

WORKS WITH NEST

All Jenn-Air® connected wall ovens now work with Nest via the Jenn-Air mobile app for iOS and Android devices. Jenn-Air® wall ovens are the first ovens available in the United States to integrate with Nest and its Learning Thermostat.

Using the proprietary app, consumers may set the Nest thermostat to react to the oven's rising temperature and decrease climate settings by a set number of degrees, then return to the original temperature setting once the oven has been turned off. Your customers and their guests should never have to feel the heat while entertaining; even when the oven is on.

Outside the kitchen, Nest can detect when the consumer is not at home. And should the oven be left on, the Jenn-Air app can be enabled to send an alert, allowing the homeowner to turn off the oven remotely.

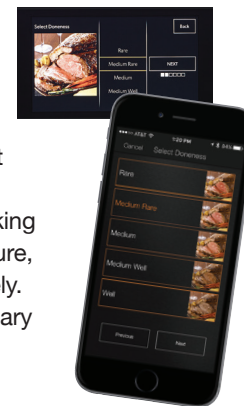

Jenn-Air and Nest collaborate to enhance your customer's lifestyle and provide peace of mind.

DO MORE WITH CONNECTIVITY

The Jenn-Air mobile app not only works with Nest, it also provides the homeowner the freedom to access and control their oven from outside the kitchen.

Your customers can use the Remote Start feature to set and start the oven from any location, monitor the progress of the cooking cycle, adjust the cook time and temperature, and even change the cooking cycle entirely. They can also access the advanced Culinary Center to customize each cooking cycle based on individual preferences.

FLUSH-TO-CABINET DESIGN MEETS STAND-OUT PERFORMANCE

Jenn-Air® wall ovens with the V2™ Vertical Dual-Fan Convection System are designed with distinctive details that elevate them to touchstones of form and function.

A large 5.0 cubic foot oven capacity per cavity ensures ample space for any culinary creation, while no preheat baking allows cooks to bake immediately on a single rack.

Halogen theater lighting inside the oven cavity transitions to full brightness when the oven is opened, illuminating the entire interior. The Chef's Light further increases visibility so cooks can check on food without opening the oven, and flush-to-cabinet design maintains the kitchen's clean, streamlined style.

Further distinctive elements include a soft, auto-close door that allows the oven door to close quietly and securely. DuraFinish® Protection helps protect the stainless steel convection tower from yellowing due to exposure to high heat and staining. Choose from Euro-Style Stainless, Pro-Style® Stainless, or Black Floating Glass designs for the perfect complement to your distinctive kitchen.

CONTROL BEYOND THE KITCHEN.

Jenn-Air unifies high performance with elegant design through liberating connectivity and distinctive design elements. Remote preheating, the innovative Culinary Center and flush-to-cabinet design distinguish Jenn-Air® wall ovens as touchstones of innovative kitchen design.

And now all connected Jenn-Air® wall ovens work with Nest, automatically cooling down the home as soon as the oven reaches the user-defined temperature limit, and alerting the homeowner should the oven ever be left on while no one is at home. Jenn-Air® wall ovens effortlessly enhance entertaining and provide peace of mind.
